

Once done, restart Internet Explorer and hit the IP address again. If it still doesn't install correctly, please refer to our other how-to notes for further details [www.support.techprosecurity.com/forums](http://www.support.techprosecurity.com/forums) . You should now be presented with a login screen to get in to the DVR. You may use the defaulted administrative account if not changed already (username: admin password: admin). If this user account does not work, please refer to an account that was created or altered before this setup.

You are now connected to your DVR and able to stream live! Click "Open All" to view the cameras. For further instructions on how to navigate through the DVR's web interface or to use our other standalone clients to connect in, please refer to our other how-to notes or User Manual included on the CD that is been shipped with your unit. Note: To remote in from the outside, you will need to make adjustments to your routers/modem's firewall and open the ports described in the beginning of this walkthrough. Check our other articles to get this accomplished.
